TEUFELBESCHLAG is one of Germany's leading manufacturers of glass fittings.
Our customers all over the world profit from our 40 years of experience in developing and producing glass fittings.

Great performance and innovation | With our numerous product groups we provide for flexible solutions to all of your demands. We are constantly adapting our products to the ever-changing market developments and to the requirements of our customers.

Our strengths – your gain | Our high amount of flexibility goes easily along with our goal of combining high quality and longevity in our products. Our systems are easy to be mounted while at the same time aiming for a great freedom of design. Well-established relationships with our suppliers make sure that innovative technologies and the latest materials form part of our production chain.

Decades of experience and new ideas | Our experience in the sector of glass fittings, openness to new ideas and the continuous further development of our product range form the base for our work and the realization of your imagination. Cool aluminium or high-quality stainless steel, anodized or powder-coated in your favourite colour – our products are available in a countless amount of surfaces. We have the perfect product to meet the demands of your current construction project.

Your competent partner in all situations | We assist architects and manufacturers as a competent partner. With our numerous sales representatives in Germany as well as in other European countries we provide for the maximum amount of customer support – from offer to acceptance – all from one source. Get in touch with us and profit from our team's competence!

Always up to date | Visit our website www.teufelbeschlag.com. Here we have gathered all necessary data about our products – from detailed Technical Information and drawings, to reference pictures and mounting/maintenance instructions.

Patch fitting
Standard

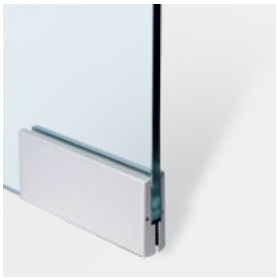
The timeless introduction to all-glass systems

No matter if in private or public areas like doctors' practices, shopping malls, banks or offices – foyers are transformed into light-flooded living environments by using glass in architecture. With our standard patch fittings single or double action doors with fix panels and overlights can be easily realized.

Patch fitting
JUMBO

Vast panels and great weights to be moved effortlessly

The requirements regarding the bearing capacity of patch fittings has steadily risen since their invention along with the weight of the glass panels. TEUFELBESCHLAG has closely observed this development and with JUMBO is providing a bigger version of the standard patch fitting which can be used for greater glass thicknesses and extra-large door panels.



Patch fitting
TUBO

Simple handling and intelligent mechanism

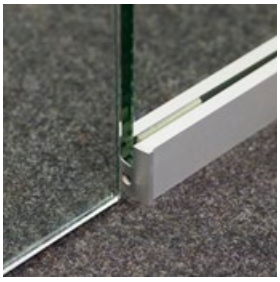
Clear shapes and slender silhouettes – by integrating the locking mechanism into the handle bar, we managed to reduce the visible elements to a minimum. Corresponding corner patches and connecting elements provide for a broad variety of possibilities of design.

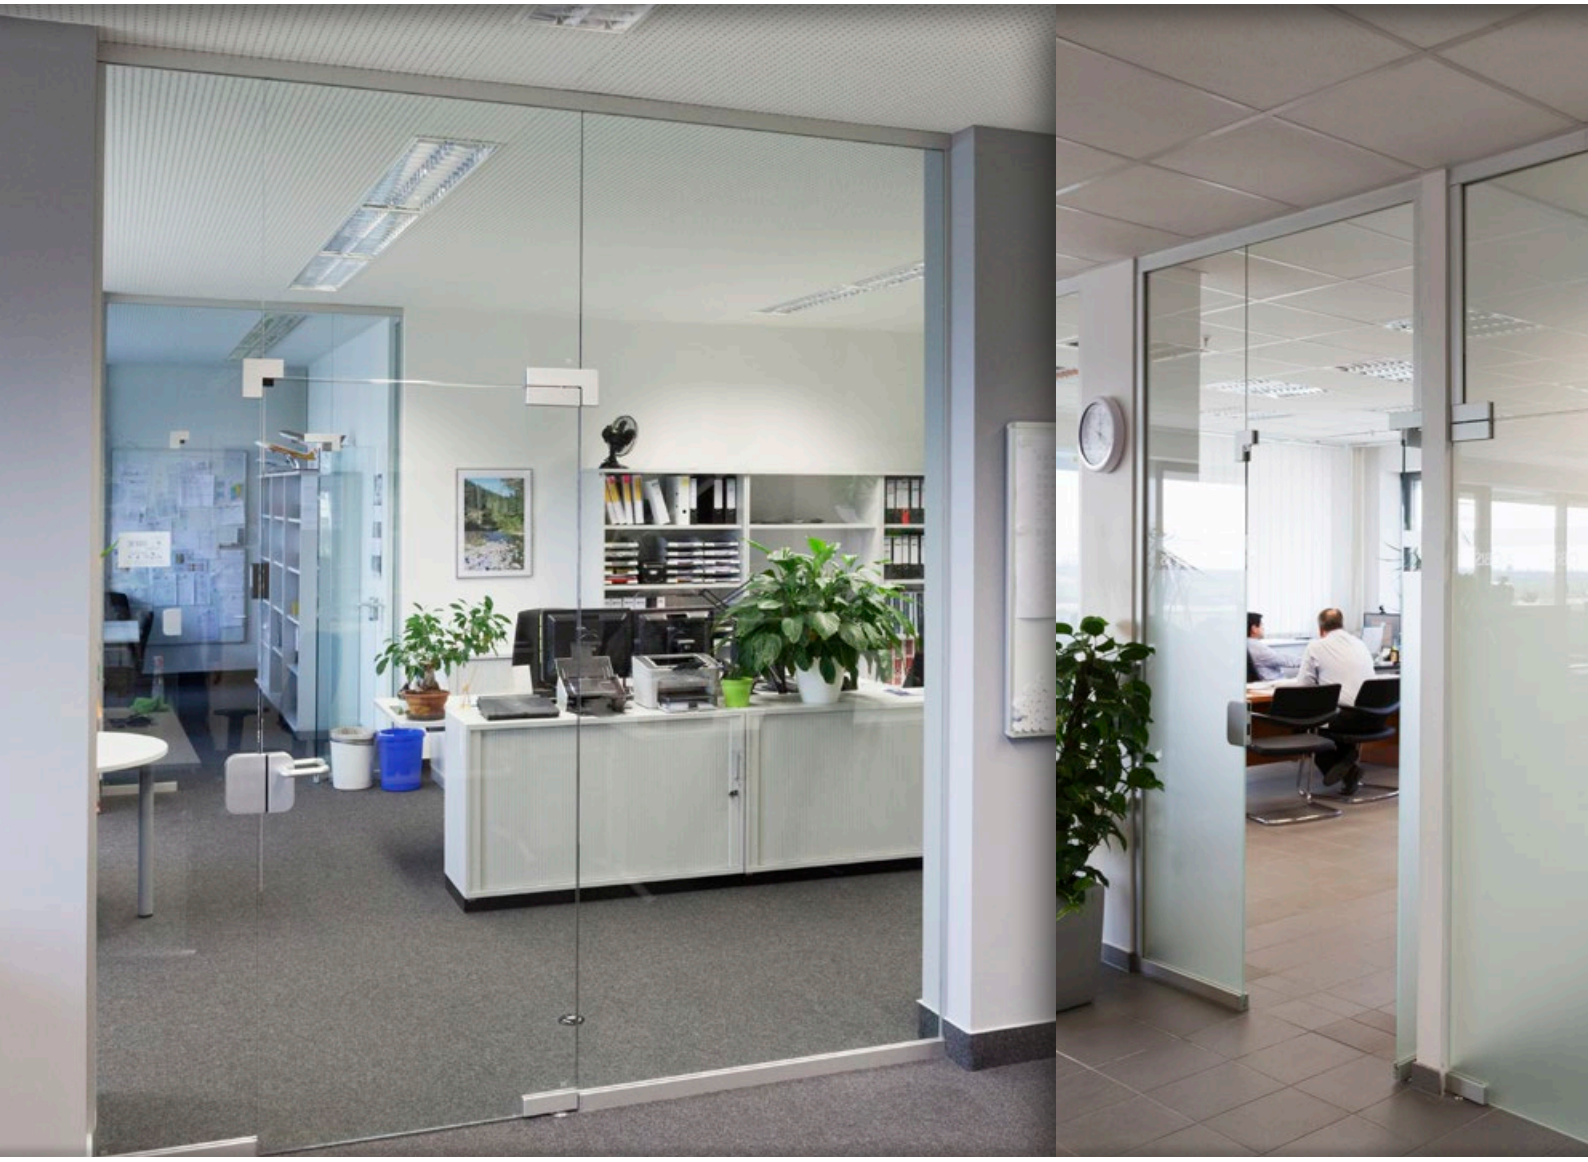
TEUFELBESCHLAG

Universal and wall-connecting profiles

Lasting connection of fixed glazings of all kinds

Universal profiles by TEUFELBESCHLAG are the first choice for reliably connecting wall and fixed glazings of all kind. They are available in different variations as U-profiles or as clamping and wall connecting profiles made of aluminium. Suiting accessories form also part of the product range.





Sliding door fitting PRAKTICA

Proven a thousandfold with a timeless look

Good design displays harmony on various levels. A good sliding door opens with style. It connects rooms and creates new ones while at the same time dividing and defining its position. PRAKTICA is designed for 1- or 2-panel systems which can be complemented with additional fix elements. With the option of fastening the upper track to ceiling or wall almost everything is possible.

Sliding door fitting
MULTI*slide*

For especially heavy sliding doors

MULTI*slide* is designed for the really BIG sliding panels. Depending on the panel weight, steel clamping plates, glass bore holes and special rollers make even large installations easy to move. A great way to ensure that BIG and elegance do not exclude each other in this case.

Sliding door fitting miniMO*line*

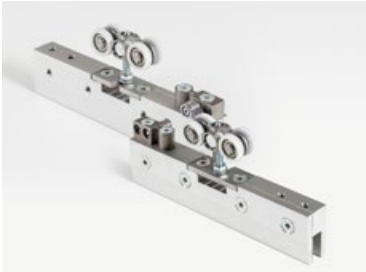
Small construction for great panel weights

The upper track of our smallest sliding door fitting miniMO*line* is reduced to a minimum of 60 x 60 mm. By means of the integrated height-adjusting mechanisms the panels can be easily adjusted. With the division into three weight classes and soft stop a suitable system is available for every application.

Sliding door fitting VARIANT standard and coupler kit

Numerous possibilities for flexible room geometries

VARIANT is our synonym for intelligent and flexible sliding door systems offering “endless” variations and fitting in almost any opening: starting with a simple sliding panel to 3-panel-installations with coupler kit and different upper track dimensions.



Messe
Hauptbahnhof
Galluswarte
Stadion

Sliding door fitting VARIANT dual drive and softStop

Useful accessories for even more comfort

With the dual drive mechanism handling VARIANT sliding doors becomes even more comfortable. An intelligent mechanism causes that both panels open even if only one panel is being moved. If too much vehemence is applied while opening or closing, this is easily absorbed by the softStop feature and provides for a smooth movement.

Folding doors
Series 100

More room for you to feel comfortable

If there is not enough space for normal doors or if rooms are to be divided for certain occasions - folding doors are the best choice. They create private space, in offices or shops as well as in private homes. Due to their construction, the whole panel width is folded from the middle axis to one side when opened.

Light folding partition Series 500

Folding doors without door rails

The light folding partition Series 500 concentrates on the essentials. The light construction is ideal for offices and studios, but can also be used in upscale home design. The elegant wall can easily be folded up and parked at the side.

Folding doors with single hinges VISTA*fold*

Filigree folding doors without door rails

VISTA*fold* – Our smallest folding unit with single hinges, VISTA*fold*, is suitable for 1- to 5-panel installations in private homes. A classy whole-glass look is its main feature along with great performance combined with small weight.

Accordion doors
Series 200

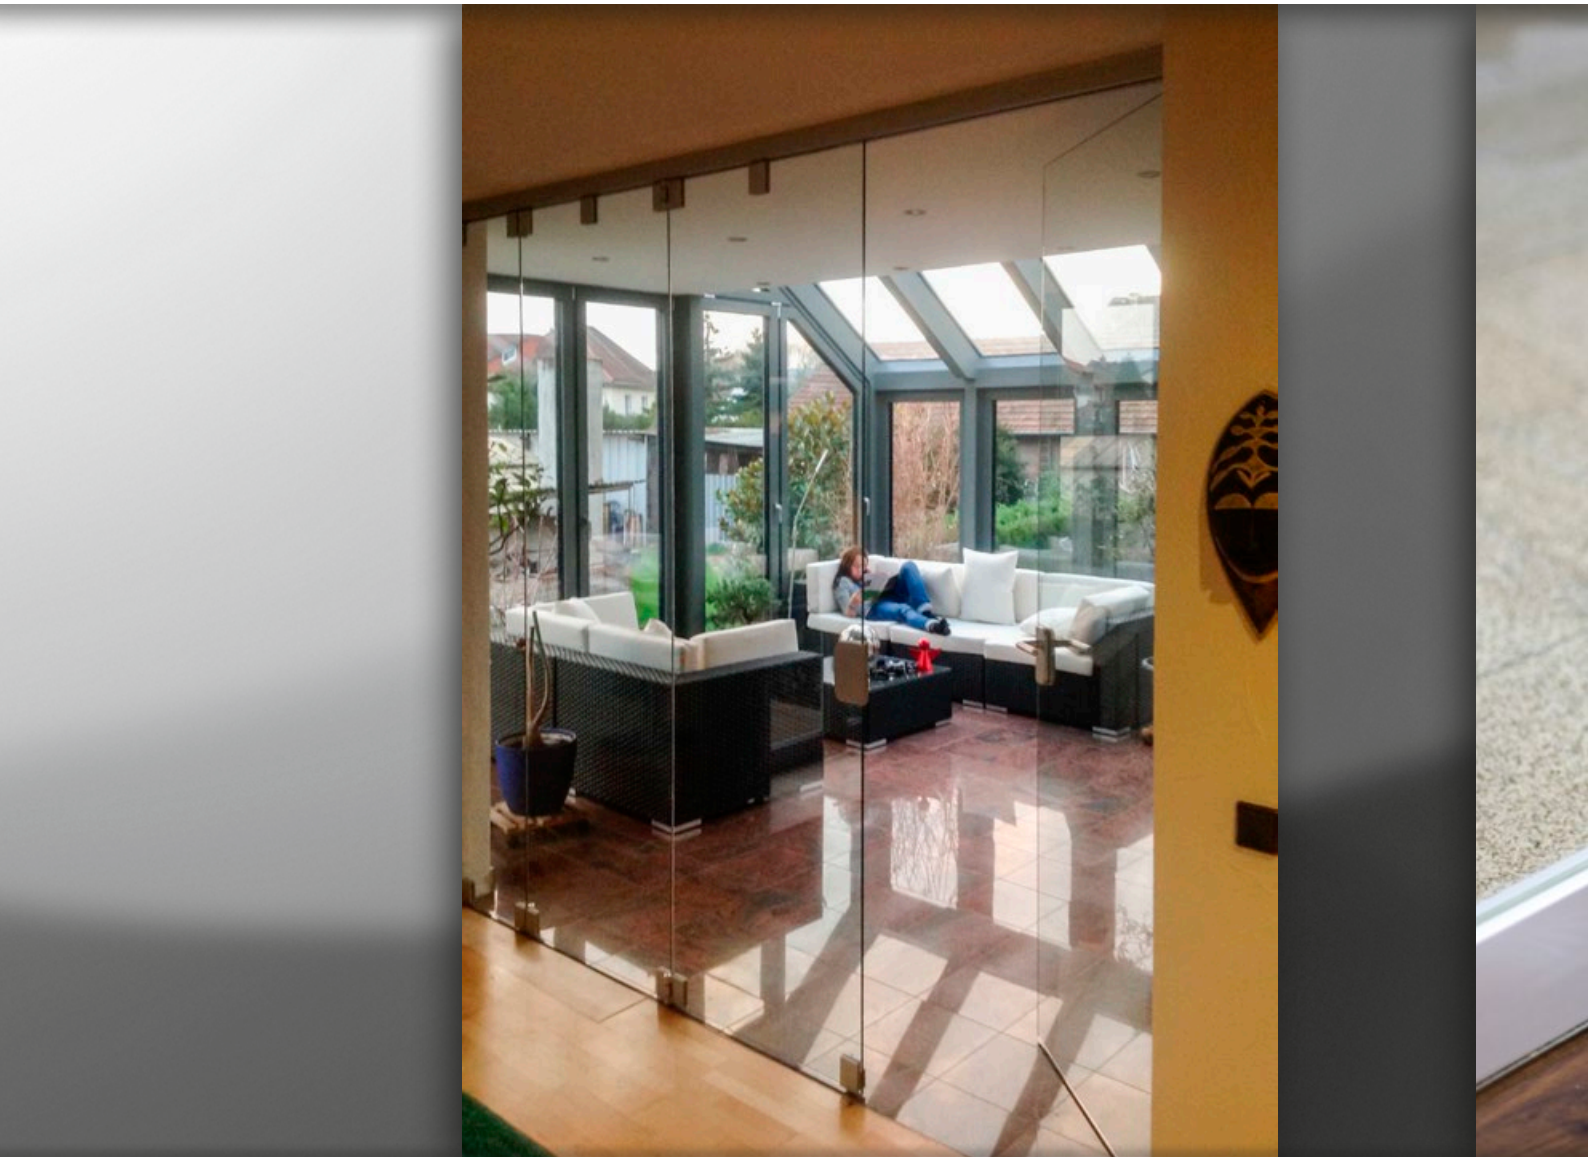
If symmetry is the main focus

Accordion doors are another convenient way of dividing rooms. Unlike folding doors, here, one half of the panel is parked on the inside and the other half on the outside.

Accordion doors with single hinges VISTA*fold*

Filigree accordion doors with single hinges

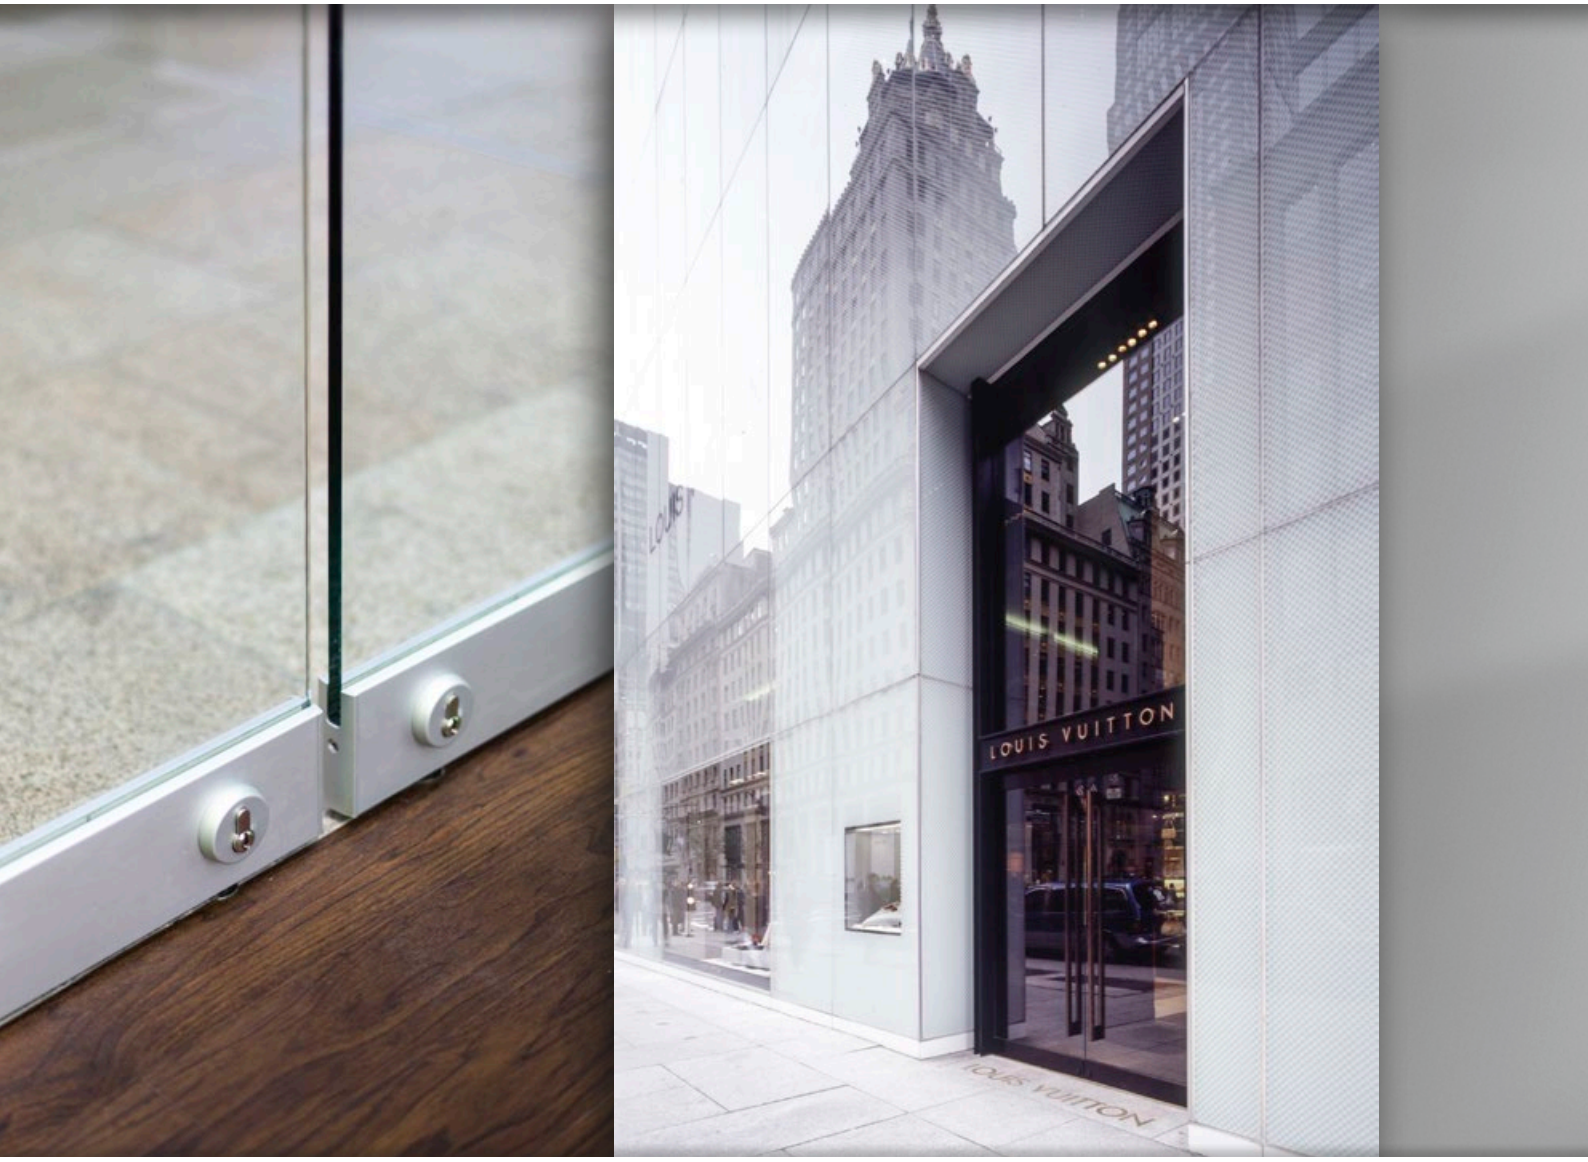
As the rollers are located in the centre of the panels, the panel width is parked equally on both sides when the installation is open. Like this, space on either side of the door can be optimally used.



Door rails for all-glass single and double action doors

Functional and timeless design

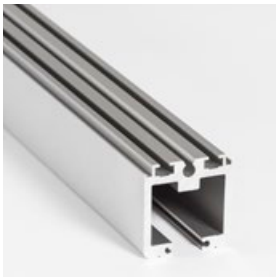
Electric door openers, buzzers with cable conduit, floor springs or seal brushes can be hidden inside the door rails. Be curious what our door rails have to offer for meeting your demands.

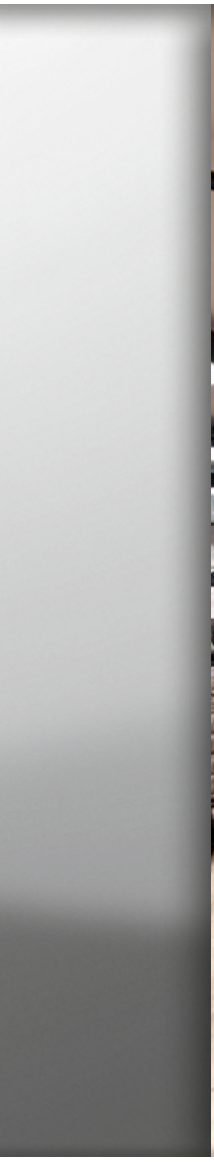


Stacking-sliding walls
Series 700 Standard

Flexible room partition with unobtrusive looks

Stacking-sliding units Series 700 can easily be moved and handled. No matter if in shopping malls, in conference or exhibition rooms or in private homes, Series 700 is the best solution for panel heights of up to 2,8 m.

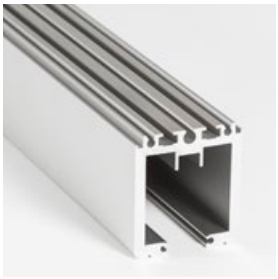


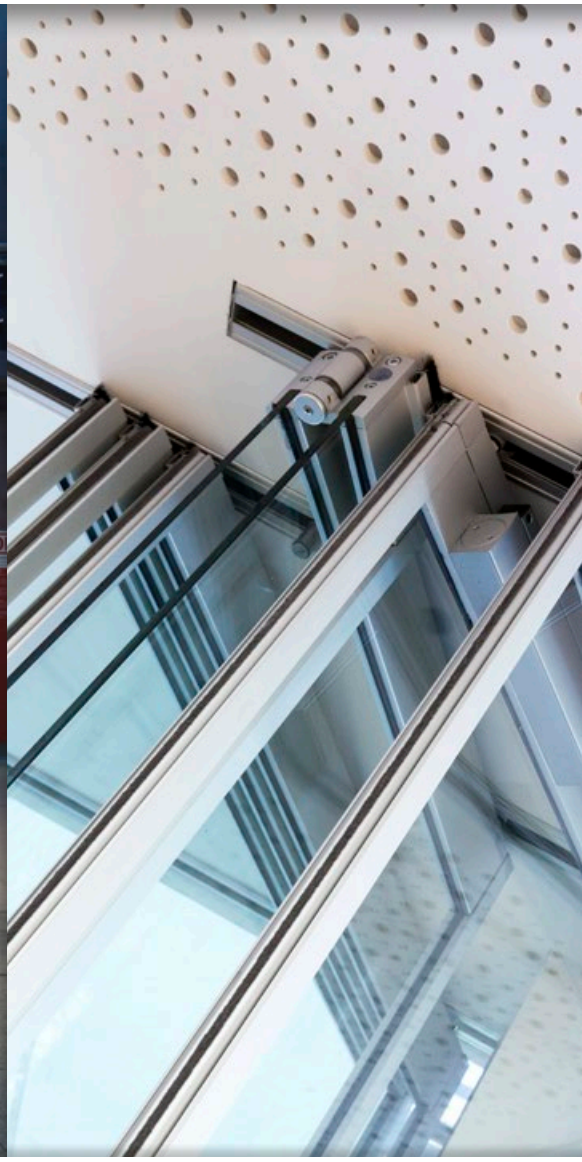


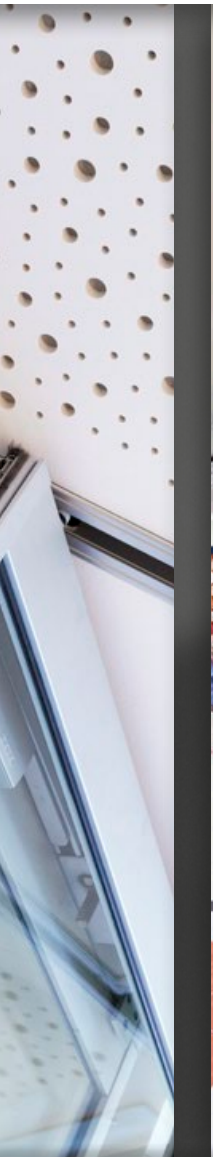
Stacking-sliding walls Series 750

Transparency and movement in large building projects

Stacking-sliding units Series 750 cover the medium panel range of 2,8 m to 3,5 m and therefore are the perfect choice for shopping malls. The upper tracks can of course be bent and with a great number of bowed sections and junctions individual layouts are possible.





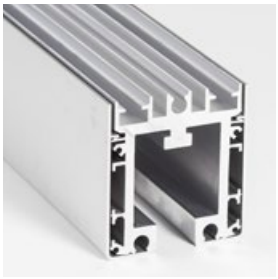


ESPRIT

Stacking-sliding walls Series 800

Easy motion combined with almost unlimited height

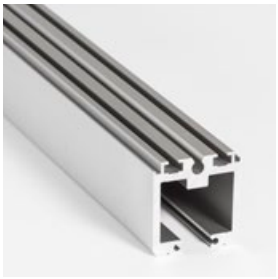
With TEUFELBESCHLAG's stacking-sliding unit Series 800 straight and polygonal glass sliding walls of heights of up to 4 m can be realized without difficulties and with the possibility of individually designing all kinds of layouts. One of the highlights here is the single or double action stacking-sliding panel with overlight.



Stacking-sliding walls JUNIOR

Unostentatious design for great transparency

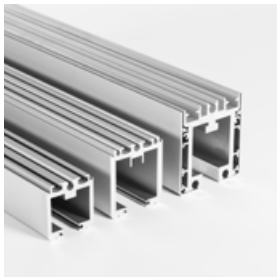
Wherever unobtrusive elegant corner patches instead of continuous door rails are asked for, wherever looks are not to be restricted, stacking-sliding units JUNIOR by TEUFEL-BESCHLAG provide for the ideal conditions.The upper tracks of series 700 can be bent and are therefore also suitable for semi-circular or elliptical constructions.

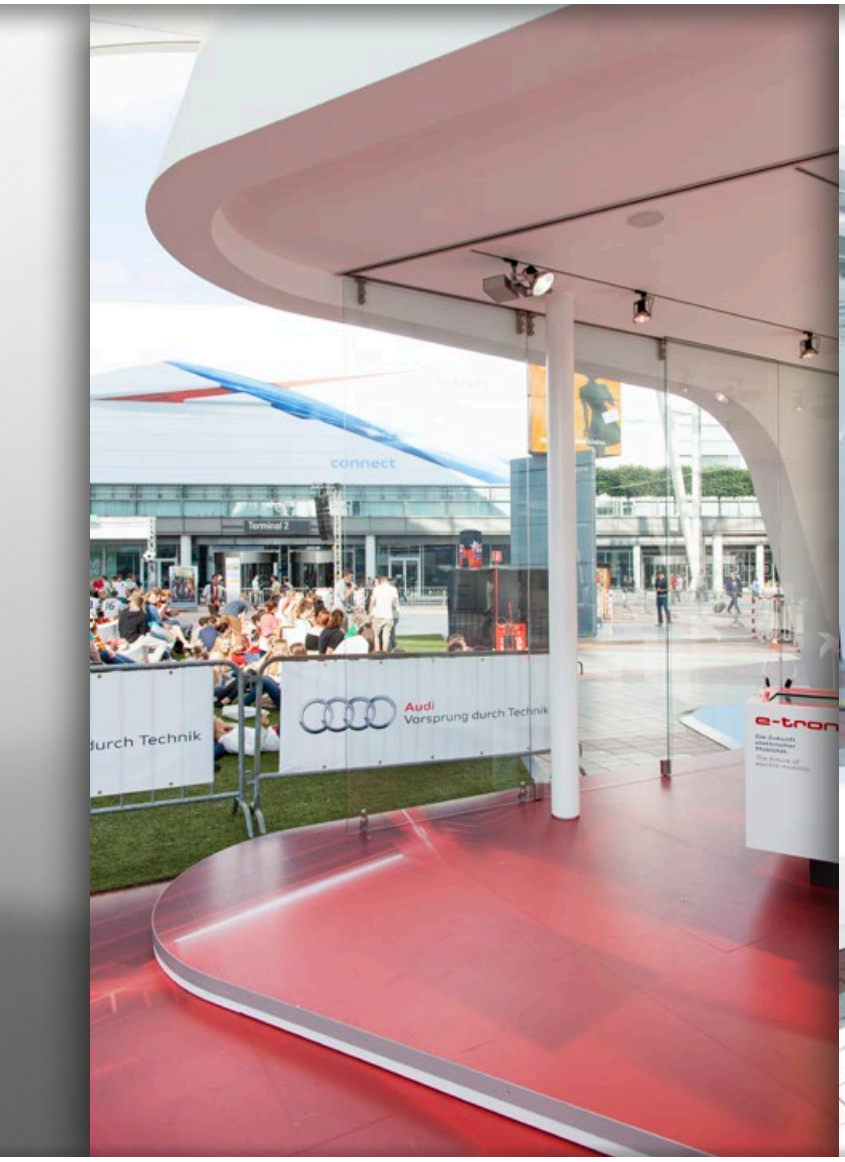


Stacking-sliding walls
PUNKTO

Down to the point in an elegant and secure way

The stainless steel point fixings offer an elegant alternative to classical stacking-sliding units with door rails and provide for an equally firm connection. For installation heights of up to 3m an installation flush with the glass is possible for our PUNKTO fitting by means of counter sunk screws. Larger panels of up to 4 m are fixed with attached rosettes.





Smoke and sound protection door TEUBA RS

Room partition without sound and smoke

Our TEUBA RS reliably prevent the distribution of fire and flue gases. At the same time our DIN18095 approved doors also prevent the expansion of sound and can be used as an elegant and functional room dividing system. Like this, we combine ideal smoke and sound protection with ambitious design.

From past to present

Richard Teufel founded the company in 1975 as an individual enterprise with its company site in Munich. In 1981 the enterprise was transformed into a company with limited liability. Due to the growing production TEUFELBESCHLAG moved its company site in 1991 to Tuerkenfeld, 40km west of Munich, close to the Ammersee.

In August 2008 Senior Partner Richard Teufel stepped down from operative business and handed over the company's fortunes to his daughter Alexandra and his son-in-law Christian Steigerwald.

Currently a staff of 30 people is working in our production as well as in the commercial and technical departments.

In Germany and around the world

A team of dedicated and competent sales representatives all over Germany is taking care of our customers' needs and is always willing to help with words and deeds.

During the past years numerous sales partnerships with selected and specially trained companies in Europe and beyond have gained in importance. We are constantly extending and strengthening these relations in order to guarantee for the best support of our customers even in the most remote corners of the world.

Certified quality and environment management

Since 2012 TEUFELBESCHLAG GmbH is a company certified according to DIN EN ISO 9001 and DIN EN ISO 14001. Our successful certification is another indication for us constantly working to improve our quality management within our own company as well as with regard to the cooperation with our suppliers and customers and our will to improve our performance. Content customers, clear processes and structures along with sustainable environment protection and handling of resources were and still are main features of our daily work

We make your ideas come true!
